Discover the history of buildings -- why they were built and the techniques used in their construction. Here is an exciting and informative guide to structures in which we live, work, play and worship. Superb color photographs offer a unique eyewitness view of buildings from the ground up. See incredible stone gargoyles, where linenfold wood paneling is found, what a Japanese screen is made of and how a hammer-beam roof is supported. Learn how stained glass is made, the difference between hipped and gabled roofs, how medieval tiles were made, what pantiles are and how stonemasons dress and carve stone. Discover the recipe for limewash, what a leggett is, what the three Greek orders were, how towers are built and how houses are built on mountainsides, and much, much more!

My Personal Review:
Like another reviewer here, I was absolutely stunned at the amount of information if reference to buildings that the author was able to pack into this one. The book explores different building styles from around the world. The photos and drawings are of top rate quality and just to flip through the book, examining the pictures is worth the price of the book along. The illustrations and photos though, are just part of the total story of this book. The work examins, often in detail, how different parts of different structures are build, i.e. doors, windows, walls, fire places, chimneys, columns, arches (concept), thatching, roofs, painting/tile, supports, materials decorations and much, much more. The text is wonderful. Even though this is classified as a childrens book, it is actually
much more, although, most kids seem to love it. This is a wonderful addition to a wonderful series and I certainly highly recommend it.
