Our amazing, tumultuous century of change rendered in brilliant you-are-there style. Witness wars and peace, the race in space, and the rise of the skyscraper!

History made easy and fun, that's what this book is all about. I hated history when I was in school because the textbooks were boring. Now this book is something completely different. For every month of each year since the beginning of the century it has the highlights of the important events that happened that time. It is like reading an article in the newspaper, giving you the feeling of the era and also providing great pictures. This chronicle is all about pictures. It's structure has a feeling of a magazine or a newspaper.

The whole idea is that you get all the important events of the 20th century in an enjoyable fashion. It covers all aspects of the history like scientific breakthroughs, artistic movements, wars, politics, from all around the world but with a particular emphasis in the US history (I have also read the Greek version which gives more emphasis in Greek history).

The book is huge and it is more like an encyclopedia rather than a history book. I like to read it before I go to bed and I doubt that any reader will be able to go from cover to cover singlehandedly. It will really strengthen your skills in world history and because of the informal way of covering the events (more like a reporter's point of view rather than a professor of history) you will be able to remember a lot after you have read the book. I enjoyed particularly the coverage of the WWII, it is breathtaking, its like reliving the whole thing. I can only imagine the poor people reading in the newspapers of the era the advancement of Hitler's troop across Europe and then the break of war and the losses and the great battles and..... I can go forever.

This book is also a great option for a gift. Believe me the people that you are going to give this book will really appreciate it and will remember you for a long time.
