By connecting applications, modeling, and visualization, Gary Rockswold motivates students to learn mathematics in the context of their experiences. In order to both learn and retain the material, students must see a connection between the concepts and their real lives. In this new edition, connections are taken to a new level with “See the Concept” features, where students make important connections through detailed visualizations that deepen understanding.

Rockswold is also known for presenting the concept of a function as a unifying theme, with an emphasis on the rule of four (verbal, graphical, numerical, and symbolic representations). A flexible approach allows instructors to strike their own balance of skills, rule of four, applications, modeling, and technology.

Package consists of:

0321431308 / 9780321431301 MyMathLab/MyStatLab -- Glue-in Access Card

0321654064 / 9780321654069 MyMathLab Inside Star Sticker
My Personal Review:
I ordered this booklet for a course that my son will be attending in college. When I received the booklet, I wanted to see it for the content. As a retired math instructor, I was disappointed. The study guides and practice examples are good, but needs more indepth step-by-step instructions to the final answer. Definitely not worth the cost of the book and the key to the website.
