My Personal Review:
I have been familiar with this book for more than 15 years. I read them from library when I worked in China, at that time it was impossible for me to obtain one (most Chinese can not afford the cost). So I have a dream to translate the book into Chinese. From basic, this book traced the recent advances in corneal cell biology, immunology, microbiology, it supplies an overview the foundation of cornea. From clinic, it is practicable. It gives a detailed technique. It is a treasure box for guiding a new doctor. I think I have been deeply benefit from this book.
