Current Therapy of Trauma and Surgical Critical Care by Donald D. Trunkey MD  FACS

An Excellent Summary For Quick Reference

Heres a unified evidence-based approach to problems encountered in trauma and critical care surgical situations. Comprehensive and concise, it is ideal for a quick overview before entering the operating room or ICU, or as a review for board certification or recertification.

Be prepared for the unexpected with practical, concise coverage of major surgical problems in trauma and critical care.

Get expert practical and up-to-date guidance on ventilator management, damage control, noninvasive techniques, imaging, infection control, dealing with mass casualties, treating injuries induced by chemical and biological agents, and much more.

Find the information you need quickly and easily through numerous illustrations, key points boxes, algorithms, and tables.

My Personal Review:
This is following along in the "Current Therapy" series and is an excellent review of concepts in critical care and trauma. The chapters are well organized, fairly thorough, and give a good summary of the current recommendations for trauma care. Included is a good review of critical care concepts. A definite must for anyone who is rotating through a trauma service or a community general surgeon needing a good refresher in trauma, acute care concepts.
