You already know about the devastating recession were in. Jobs are being cut by the tens of thousands. Real estate values are plummeting. Retirement plans and 401ks are going up in smoke. And then there's rising inflation. And whether we like it or not, higher gasoline prices again are right around the corner.

Then there's the ever-present confusion and dips in the stock market, and, whether we want to admit it or not, the fact that the world is finally beginning to run out of essential raw materials, such as silver, titanium, and, of course, oil.

Yes, the economy is definitely a wreck. Even worse, according to most experts, our problems are not going away soon. Were going to be in serious financial trouble for a long time.

So . . . are you ready for some good news?

As you will discover in GAME OVER, bestselling author and investment advisor Dr. Stephen Leeb shows you how to not only survive in the current economic maelstrom but actually find a way to thrive.

Dr. Leeb first tells you just how bad things are by exposing the basic suppositions of our institutions, and how quickly outdated they've become. Warning bells are sounding especially for Americans looking forward to a relaxing retirement and living off their savings, investments, Social Security, and Medicare. The time to sit up and take action is now.
Dr. Leeb provides a clear-cut and well-crafted financial road map to protect every investor in the years to come. Specifically, he reveals which key investments will steadily rise . . . the best ways to hedge surging inflation . . . and which sectors will boom.

Many will lose their savings, watch their investments shrink, and never fulfill their financial dreams. But with Dr. Leeb's advice, you can make sure yours come true.

If you're like most of us, your 401(k) is worth a lot less in 2009 than it was in 2007. You're looking for ways to preserve what's left and to prevent future erosion. You owe it to yourself to read either this book or his last one, The Coming Economic Collapse, to get a well-reasoned prediction of what may happen in the future.

As of mid-2009 there's no telling whether Leeb's predictions about inflation, developing nations, gold or oil will be correct, and there are lots of people who totally disagree with what he's saying. Still, there's a reasonable chance that we ARE going to face $4 gas prices again, and inflation like we saw in the Carter years. After carefully reading his arguments I've decided that at least a portion of my retirement investments should be in oil, Chindia, gold and other investments that have limited down-side risk. If even some of Leeb's predictions come true, these same investments will do very, very well.

If investing was easy we'd all be rich. There are no guarantees that Stephen Leeb, Jim Cramer, Suze Orman or anyone else can predict the future. However, if you're in your 50s or 60s and don't have 30 years or more to rebuild your 401(k), you might want to read this book and carefully consider what Leeb is saying. It's not a get-rich-quick scheme (somebody who had one of those was just sentenced to 105 years in prison) but it is a hard-nosed plea to look hard at assets that will do well just in case we see hyperinflation or $150/barrel oil any time in the near future.
