From a noted author comes this new edition for residents, practitioners, and technologists in nuclear medicine and radiology. Encompassing major topics in nuclear medicine from the basic physics of radioactive decay to instrumentation and radiobiology, it is an ideal review for Board and Registry examinations. New features in the Third Edition include: statistical tests - the Chi-Square test and the evaluation of diagnostic tests, new chapter on software and DICOM, extensive updates on SPECT/CT cameras, new chapter entirely devoted to PET, expanded chapter on cellular damage by radiation and on dirty bomb and radiation phobia, new revised NRC regulations

My Personal Review:
A must for Nuclear Medicine and Radiology residents.
