This book is the story of those passionate gardening extremists who turn a particular species of plant into their particular mission in life. Among them, Margaret Sharp and Pam Puryear, who have devoted themselves to collecting and saving old roses. Ken Druse provides exacting prose portraits to go with his beautiful photographs of the plants that are the source of such deep obsession. The result is a book that helps make clear just why gardening is one of the most popular pastimes in the world.

My Personal Review:
I not only collect plants, I also collect books by Ken Druse. There are so many garden books out there today, and many are disappointing. Druse's books are the best. I read them over and over -- and the pictures are incredible. There could not be more inspirational and informational books on my favorite hobby.
